## SUMMARY OF INFORMATION

During this session, I could see an object that looked like an airplane but instead of flying, it was standing straight up. I could see that something on the tip top of the plane was spinning very fast and the airplane started to move from side to side conducting a sweeping motion while the ball on the top was moving very fast. When the plane was moving from side to side, it could have been in an operational mode and it was a collection intelligence instrument. *Foil wraps around the ball when not in use.*

Away from this site, I then saw a man. He was bald and had thick shoulders. He was not near the site however, he could have been waiting for information.

I then could see a van or a truck driving down a hill and across a desert away from the site. This van or truck was dark in color and it was a civilian truck or van. It was not military but somehow it was associated with the airplane.
